

State and Private Forestry Fact Sheet

South Carolina 2019

Investment in State's Cooperative Programs

Program	FY 2018 Final
Community Forestry and Open Space	\$0
Cooperative Lands - Forest Health Management	\$556,482
Forest Legacy	\$0
Forest Stewardship	\$201,568
Landscape Scale Restoration	\$408,346
State Fire Assistance	\$1,801,424
Urban and Community Forestry	\$240,000
Volunteer Fire Assistance	\$213,989
Total	\$3,421,809

NOTE: This funding is for all entities within the state, not just the State Forester's office.

Program Goals

- The cooperative programs are administered and implemented through a partnership among the State of South Carolina, the USDA Forest Service and many other private and government entities. These programs protect and promote the health and productivity of forestlands and rural economies. Emphasis focuses on timber and other forest products, wildlife, water resources, rural economies, and conservation practices
- The overarching goal is to maintain and improve the health of urban and rural forests and related economies as well as to protect the forests and citizens of the state. These programs maximize cost effectiveness through the use of partnerships in program delivery, increase timber volume, increase forestland value, and improve sustainability, and the programs do so in a voluntary and non-regulatory manner. The programs are a significant aid to retaining working forests.

Key Issues

- The State continues to focus on two key initiatives: protecting South Carolina forest resources and further developing the awareness of the contributions these resources make to the economy and quality of life for SC citizens.
- Other key issues include invasive species, natural resource sustainability, population growth and urbanization, changing landowner goals, endangered and threatened species, physical/social/mental health benefits, urban canopy cover, forest parcelization/fragmentation, and scenic resources/outdoor recreation.
- Wildland fire emergency response capacity declined in recent years due to funding cuts. With the improving economy and funding, more firefighters have been added and additional new equipment (enclosed cab tractors, transports, firetracks and engines) has been purchased. A major initiative was launched in 2013 to replace all open cab tractors and restore numbers of firefighters to a sufficient level for an average fire season. Forty-nine percent of tractors have been replaced.

Forest Facts and Accomplishments

Selected Facts	Value	FY 2018 Accomplishments	Value
Population	4,625,364	Landowners Receiving Educational or Technical Assistance	2,435
Acres of Forest Land	12,931,384	Acres Covered by New or Revised Forest Stewardship Plans	22,536
Acres of Nonindustrial Private Forest Land	9,712,000	Acres in Important Forest Resource Areas Covered by New or Revised Stewardship Plans	9,328
Number of NIPF Landowners	301,000	Volunteer Fire Departments Assisted	5,000
Acres of Federal Land Under State Fire Protection	926,000	State Fire Communities Assisted	126
Acres of Private Land Under State Fire Protection	12,730,912	Coop Forest Health Acres Protected	2,000
Number of Rural Fire Departments	539	Forest Legacy Project Acquisitions	0
Cities and Towns	269	Communities Provided Urban Forestry Program Assistance	78
Forest Based Employment	35,116	Population Living in Communities Provided Urban Forestry Program Assistance	2,684,294
Economic Impact of Forestry (by rank)	3	Urban Forestry Volunteer Assistance	3,551
State Forestry Budget (All Sources)	36,130,812		

Program Highlights

Cooperative Fire Protection

State Fire Assistance (SFA) provides funding to support wildland firefighting operations throughout the state. Preparedness funds are used to supply Personal Protective Equipment, water handling equipment and supplies, training (wildland and leadership), air operations support, and upgraded communications equipment. The SC Forestry Commission's (SCFC) Computer Aided Dispatch System, consistently recognized as one of the best in the country, is also maintained with these funds. SFA mitigation funds in the amount of \$127,908 were used by the SCFC to provide assistance to 21 communities in the wildland urban interface. SFA mitigation funds in the amount of \$56,627 were used for fuel mitigation on 26 tracts. Wildfire Hazard and Risk Assessments were completed for 14 communities. Over 215 Community Wildfire Protection Plans have been developed covering approximately 711 communities. The Firewise Mobile Exhibit was used on 4 different occasions by the SCFC and USDI Savannah River reaching over 5,000 people. The Volunteer Fire Assistance (VFA) program helps rural fire departments support their fire prevention and suppression efforts by building capacity to respond, especially in the wildland urban interface. \$191,294 of VFA funds were allocated to 90 fire departments. There are 699 Communities at Risk that VFA grants have helped protect. The Federal Excess Personal Property Program (FEPP) and Firefighter Property Program (FFP) programs are other ways the SCFC works with rural fire departments to increase their firefighting capacity by providing equipment and vehicles on loan from the USDA Forest Service. There are 2,395 pieces of equipment on loan to approximately 275 departments throughout the state, valued at \$52.7 million.

Forest Health Protection

In 2018 southern pine beetle (SPB) activity increased within Pickens, Oconee, Anderson, and Edgefield Counties, based on spring trapping data. All spots were on Forest Service land and had factors that increased the risk of SPB outbreaks, including overstocking, susceptible species (shortleaf pine), and drought. We continue to work with the Forest Service in the State of South Carolina to use management strategies on these spots, as well as identifying other areas at risk and applying mitigation strategies. Approximately 108 acres of forest susceptible to SPB were thinned pre-commercially. One thousand nine hundred sixty-eight acres of pines were planted at reduced densities to decrease susceptibility to SPB. Oak wilt continued to be a problem in water oaks in Aiken, Barnwell and Lexington Counties. Conversations with landowners strongly suggest that the outbreak of oak wilt started after the 2014 ice storm; broken limbs allowed insect vectors carrying the fungal pathogen into the vascular tissue of the tree. Cogongrass infestations have been detected in 13 SC counties, but only five of these were active in 2018, covering less than 20 acres. Hurricanes Florence and Michael caused little immediate damage. The summer of 2018 was a dry year and we continue to see spotty mortality of susceptible trees from the

sandhills to the piedmont region.

Forest Legacy

South Carolina was one of the first states to participate in the Forest Legacy Program (FLP) and has been a national leader in acreage and funding. To date, the South Carolina Forest Legacy Program has completed 13 fee-simple acquisition projects (65,914 acres) and two conservation easements (12,080 acres). In total, 77,994 acres of working forest land and valuable wildlife habitat has been protected across the state. The FLP is unique in South Carolina in that it resides within the SC Department of Natural Resources, specifically in the Wildlife and Freshwater Fisheries Division. A TWS Certified Wildlife Biologist is the coordinator of the program. During FY18, six potential project tracts were investigated. The FY19 FLP Acquisition Grant known as the "Liberty Hill Extension Project, Doughnut Hole Tract" has not yet been approved for funding. A second tract, the "Hihn Tract" that is part of the FY16 "Chestnut Ridge Extension Project" is awaiting closing. The new FY20 submission is the "Saluda Rivers Connector Project, Pacolet-Milliken Tract" which consists of 850 acres in Greenville County, SC.

Forest Stewardship

A goal of the SCFC is to conserve and manage working forest landscapes in our state to achieve multiple objectives. The Forest Stewardship Program is our primary vehicle to promote the informed management of forestlands and to provide landowners with the technical assistance they need to successfully manage their forests. The SCFC continues to emphasize Forest Stewardship Plan development and landowner recognition programs, focusing efforts on priority areas identified in the state's Forest Action Plan. Private forestry consultants have historically played a very active role in producing Stewardship Plans for private landowners across the state, but decreased federal funding for the program over the last few years has eliminated our ability to partner with the private sector for consultant-written plans. Thus, the number of new and revised plans completed by consulting foresters has decreased significantly. However, recent additional state funding for Forest Stewardship employee salaries should reverse this trend by allowing more funds for consultant-written plans.

Currently 314,132 acres are enrolled in the Forest Stewardship Program in SC with 149,028 of these acres being in Important Forest Resource Areas. Implementation monitoring indicates that approximately 97% of South Carolina's current Forest Stewardship Plans are being implemented. In addition to adhering to the standard implementation monitoring protocol for FY18, SCFC included additional evaluation of specific management outcomes that have resulted from the implementation of Forest Stewardship Plans. Results indicate that Forest Stewardship Plans are having a positive impact on specific management outcomes of interest in SC, resulting in more retention of working forests and increased timber production which generates more forestry jobs. Results also indicate that landowners with Forest Stewardship Management Plans are significantly more likely to be engaged in active management of their woodlands.

Resource Development

The impact of the forest industry on South Carolina's economy has grown from \$17.4 billion in 2006 to \$21 billion as of 2015. The industry segment using small-diameter wood remains strong, and the solid wood product industry has largely recovered from the past recession and housing downturn. There are 100 primary and 778 secondary, or value-added, forest product mills in the state that support a total of 84,425 jobs.

South Carolina has an abundant resource with more standing wood inventory than ever recorded. The wood supply is balanced between hardwood and softwood forests as well as between natural pine and planted pine stands. However, wood supply projections point to a decline in small-diameter pine until tree planting increases. Projections of large-diameter pine inventory continue to increase creating an opportunity for economic growth.

The SCFC owns two forest tree seedling nursery and tree improvement facilities in support of forest landowners and tree planting. The Tree Improvement Program, headquartered at Niederhof Forestry Center, includes 1.5 generation longleaf pine and 3rd generation loblolly pine seed orchards. Taylor Nursery is being operated under the management of ArborGen as part of a 10-year contract that includes the production and sale of forest tree seedlings. Up to 5 million pine and hardwood seedlings will be produced specifically for South Carolina forest landowners at SCFC-approved pricing.

The Environmental Management program also falls within the Resource Development Division. Ongoing

training programs have routinely resulted in 95+% compliance rates with state-approved Best Management Practices. Specialized BMP Foresters work with landowners and loggers to minimize impacts to water quality and site productivity.

Urban and Community Forestry

Although federal funding for the SCFC's Urban and Community Forestry program this year remained near the base level, agency Urban Foresters were able to provide technical and educational assistance to 54 communities, 14 non-profit organizations, 8 educational institutions, and 32 other entities. In July, the SCFC received state appropriations for U&CF program salaries. The federal grant will be modified to reflect that federal appropriations will not be used for the funding of U&CF programs salaries. Federal funds will be utilized for operations, including a pass-through project to help create a guide for incorporation of urban forestry and green infrastructure in comprehensive plans. With the assistance of a Landscape Scale Restoration (LSR) grant awarded in 2015, the SCFC provided financial assistance to a Council of Governments, a non-profit organization, a county, and 2 cities to develop their green infrastructure plans. This year, as a part of the 2015 LSR project, the SCFC and Green Infrastructure Center (GIC) partnered together to deliver a Green Infrastructure Symposium as the final project to complete the grant. Some of the speakers were grant recipients. Three grantees told about the implementation of their GI plan, as was created as a result of the grant, to 35 participants. This LSR grant is now completed and closed out. An additional LSR grant was awarded in 2016 to study the impacts of urban tree canopy on storm water runoff. SCFC and Charleston have completed this 2016 grant. There will be a completed casebook that documents all of the 12 cities that participated in 6 states. Communities can utilize the casebook and implement recommendations made to address how trees can help with stormwater abatement. U&CF staff partnered with GIC and NC to create a Developer Guide (2017 LSR). Two developers in each state have partnered with the project, and the sites have been mapped and evaluated. The guide is being written now.
